Collaboration Wall

The Collaboration Wall is a high-impact, multi-functional videowall solution allowing for effective group visualisation, brand advertising and workspace collaboration. Suitable for boardrooms, training spaces and customer experience centres. This impressive ultra wide canvas is not only impactful, but simple, easy to use and ultra reliable.
1. Signage

Immerse visitors with inspiring digital content that creates impact when you enter the space. The ultra wide canvas can display key brand information to customers, suppliers and employees. Simple content management allows customisation and personalisation to further enhance the experience, as well as ensuring content is relevant and up to date.
2. Wallpaper

Simply by getting ready to present with ClickShare, the canvas will automatically show subtle, non-intrusive branded wallpaper that doesn't distract from the meeting or presentation taking place. This wallpaper is utilised to increase the adoption of the technology by showing useful, step-by-step instructions, and can also further enhance brand values.

3. Present

The Collaboration Wall will automatically optimise the presentation and display of content to best fit the ultra wide canvas. A single device presenting gets the central position and will always be shown in the correct aspect ratio. The power of ClickShare does this all without any user unnecessary intervention or control, keeping the user experience simple and seamless.
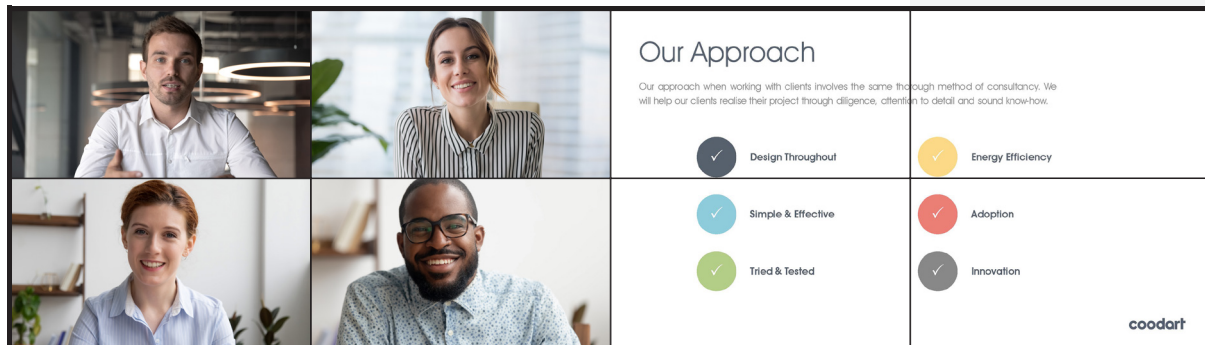

Dual Device Collaboration

Collaborate effectively by displaying from dual devices simultaneously, across multi platforms using ClickShare. Two devices will typically fill the whole ultra wide canvas and ensure maximum utilisation of the video wall. ClickShare allows presenters to take control and focus on their content, and again, ClickShare will always optimise how content is displayed.

Multi Platform Collaboration

PC, MacOS, iOS, Android and Chrome devices can be easily connect and be displayed, allowing participants to share from their chosen device with convenience, in both portrait and landscape mode. ClickShare will automatically reformat itself and decide how best to utilise the ultra wide canvas.

Video Conferencing Integration

Integrate the Collaboration Wall to your chosen video conferencing platform such as Polycom, Cisco, LifeSize, Zoom or Microsoft Teams, and utilise the canvas to create an immersive video collaboration experience. Simplicity is still key and ClickShare will continue to enable content sharing into the video conference.

Solution Features

- Ultra wide 32:9 Canvas
- 7,680 x 2,160 native resolution (16.5 mega pixel canvas)
- Barco ClickShare CSE-800 presentation engine
- PC, MacOS, iOS, Android & Chrome compatible
- Native 4K HDMI input
